List of Defects/Improvements in next Release – due Thu 5 April

Reference	Description
E139	Move amendment forms back to the Ethics project
E148	Head of Departments need to receive an email notification to alert them that and SSA is pending their review. This was happening prior to go live, but not now.
E15	Details not being brought over from profile
E153	Need to be able to add non-NSW sites
E19	No researcher/investigator information is pre-populated from the Project registration section. All information has to be re-entered several times
E32	Change "ethics approval" to "ethics review." change "submitted" to "submitted."
E83	After HREA was generated and submitted, the researcher was able to "Clear content selection" (and system deleted the document from the list) but was unable to re-upload the document because it was greyed out
E87	When you select the Department, the Department Heads Name or Email Address does not appear. The applicant shouldn't have to choose anything - it should automatically appear.
E34	Instruction text as per HREA to be added.
E35	Instruction text as per HREA to be added
E36	Study Type Help text added
E37	Please add instructional text per the tracked changes version sent 23 October/1 December.
E45	Update text
E73	Intro First para, first line: change, "Human Medical Research (HMR) project" to "human research"
I18	Email Subject Line: HREA Application Submission Email sent for every SSA in application. So if the Project Registration identifies 6 sites then the HREA Application Submission Confirmation email is sent 7 times
I19	Email for each SSA notifying of application share sent to CPI on HREA submission – kind of get it but really should not be sent as does not make a lot of sense for the CPI to be notified that a site application was shared with them when it is shared by default as they are the CPI.
I30	Re-label approval options • Remove No • One is for more info form • One is for reactivate • Trigger on send email
I42	Data Migration This project has a Status of "Submitted" in REGIS, but it should have a Status of Approved. Even though the "Submitted" date is more recent than the Approved date, the Status of Approved needs to take precedence
I43	Data Migration There are two projects with the code 2018/ETH00365. One was already in the system and the other was created by data migration. This is a bug that needs to be fixed.

Plus, email Templates will all be corrected
